

MK Help Now Signature Package

Status: signature package only. This appoints nobody, approves no country facts, and authorizes no public exposure. North Macedonia / Makedonia (MK) can move from dark content to launchable content only after the required named professionals complete, date, cite, and sign the forms in this package.

Purpose: give Interdomestik a practical PDF packet that real North Macedonia professionals can sign now: local counsel, traffic/insurance practice reviewer, language reviewer, and Interdomestik release owner.

Package Documents

1. 01-reviewer-appointment-and-scope.md / PDF
 - Names the reviewer(s), qualification, independence, countersign path, and accepted scope.
2. 02-source-verification-workbook.md / PDF
 - Captures dated sources for emergency numbers, police/EAS rules, insurance, deadlines, privacy, and UPL-safe phrasing.
3. 03-content-signoff-matrix.md / PDF
 - Row-by-row L2 sign-off table for the MK Help Now content pack.
4. 04-language-and-eas-certificate.md / PDF
 - Native Macedonian, Albanian, and corridor German/EAS wording review.
5. 05-operational-release-hold.md / PDF
 - Confirms hotfix owner, alert owner, validity window, and freeze rules.
6. 06-final-pack-completion-certificate.md / PDF
 - Final go/no-go certificate binding all signatures to pack version/hash.

Rules

- No unsigned row ships.
- Memory-only validation is not sufficient.
- Every factual row needs source/citation and retrieval date.
- Legal/factual review and language review may be different people.
- If the primary reviewer is not licensed North Macedonia counsel, a counsel countersign path must be recorded.
- The package signs facts and wording only. Runtime MOB-01b still requires current authority and design-gate approval before exposure.

PDF Output

Generated PDFs belong under:

output/pdf/2026-07-05-mk-help-now-signature-package/

Completion Rule

The MK package is complete only when:

- all six documents are filled;
- required professionals have signed;
- source links/citations and retrieval dates are present;
- pack version/hash is recorded;
- validity date is recorded;
- the final completion certificate says **GO**;
- repo authority later promotes the runtime exposure slice.
